SUMMARY

Analytical and results-oriented Business Analytics graduate student with 2+ years of experience in data mining, BI, and analytics across healthcare, software and research sectors. Proficient in Python, SQL, Power BI, and Tableau, with certifications in Azure, Celonis, and Generative AI. Experienced in building predictive models, streamlining data processes, and creating impactful dashboards. Skilled at transforming complex data into actionable insights and leading collaborative initiatives to enhance business performance.

EXPERIENCE

Johnson & Johnson Feb 2025-Present
Data Engineer – Carepath, FRM Copilot Titusville (JnJ HQ), New Jersey, USA

- Developed Redshift SQL logic and data models for multiple Carepath therapeutic programs, creating views, tables and maintaining 90+ tables for multiple schemas to support accurate patient-journey and outcome reporting.
- Built BI-ready data tables, views and metadata-driven pipelines using DBeaver and SQL Workbench, enabling Power BI teams to create dashboards for PSC, Oncology With Me, Spravato With Me, Welcome Season, Patient Analytics Hub, JJPAP, and other programs.
- Worked on HIPAA-regulated healthcare data, handling PHI, performing analysis to generate actionable insights for healthcare programs and stakeholders.
- Collaborated closely with the Power BI team to create dashboards, writing DAX measures, optimizing data models, and validating KPIs to ensure accurate business reporting.
- Worked with SQL and Python to build metadata-driven pipelines and reusable logic patterns, reducing manual development effort and speeding up onboarding logics for new therapeutic programs.
- Partnered with product and analytics teams to translate business rules into technical logic, enhance existing views, resolve data quality issues, and deliver reliable insights across all therapeutic areas and programs.
- Owned business coordination for a Copilot-driven FRM (Field Reimbursement Management) program, aligning stakeholder needs with technical delivery.
- Improved reimbursement decision-making and patient access by streamlining benefit investigation, PA, payer policy interpretation, and affordability workflows, driving successful delivery of AI-enabled reimbursement capabilities.

Celonis Sep 2024-Dec 2024
Data and Process Mining Analyst New York City, New York, USA

- Conducted data and process mining with Celonis EMS on over 220K+ records in production, workflow, and finance data to identify inefficiencies, driving operational improvements
- Developed integrated data models, PQL queries and interactive dashboards to visualize workflow bottlenecks, enabling prioritization of automation and process streamlining
- Uncovered production losses from over-deliveries, 42-day sales-to-production delays, and 51.48% late FedEx deliveries, as well as delayed payments due to repetitive tasks, and other critical workflow bottlenecks

My Yoga Network May 2024-Aug 2024
Data Science and Analysis Intern Long Beach, California, USA

- Developed end-to-end Power BI dashboards using Google Analytics and custom datasets; leveraged SQL (PostgreSQL), Power Query, and DAX to model, clean, and analyze large datasets, delivering actionable insights on website traffic, user behavior, and engagement trends for stakeholders.
- Built an automated data collection workflow using Python, including web scraping for data extraction to build company's personalized AI
- Performed sentiment analysis on data from multiple websites to gauge public opinion on yoga therapy, providing real-time insights.

Vardhaman College of Engineering April 2022-April 2023
Research Assistant Hyderabad, TS, India

VI Solutions Aug 2021-Sep 2021
Machine Learning Intern Bengaluru, Karnataka, India

TECHNICAL SKILLS

Languages/Technologies: Python, SQL, PowerBI, Tableau, R, R Studio, A/B testing, MS Excel, MySQL, Celonis, SAP Signavio, PostgreSQL, Figma, MLOps, CI/CD Pipelines, Oracle DB
Libraries/Frameworks: scikitlearn, pandas, numpy, matplotlib, cv2, PyCaret, PySpark, SparkSQL, SparkRDD, seaborn, PyTorch, TensorFlow, spaCy, BERT, HuggingFace, keras, vader, beautifulsoup, Pyomo
Cloud: Azure Data Factory, Azure Machine Learning Studio, Azure Storage services, Azure Databricks, Azure Synapse Analytics, H2O.ai

Interpersonal Skills: Leadership, Stakeholder Relations, Communication, Problem Solving, Creative Thinking, Relationship Building, Teamwork, Testing

---

CERTIFICATIONS

Microsoft Certified Azure Data Scientist Associate - Link	Jan 2025
Tableau Certified Data Analyst - Link	Dec 2024
Celonis Academic Process Mining Fundamentals - Link	Nov 2024
Microsoft Certified Azure AI Fundamentals - Link	Aug 2024
Microsoft Certified Azure Fundamentals - Link	Aug 2024
Databricks Certified Generative AI Fundamentals - Link	April 2024
HackerRank Certified SQL - Link	Jan 2023
IEEE Certified: Artificial Intelligence using Python - Link	June 2021

PROJECTS

EIC – Ethiopian Insurance Corporation Analysis Report using Power BI

- Analyzed insurance performance data using **SQL and Power BI**, focusing on premiums, claims, and profitability trends across customer segments.
- Applied **Power Query** for data modeling and **DAX** to build dynamic **KPIs** like Premium-to-Claim Ratio and Cumulative Loss.
- Analyzed premiums, claims, cumulative losses, loss ratios, and temporal trends across manufacturing companies and insurance sectors to uncover key performance metrics driving financial and operational insights.

Real Time Global Weather Monitoring System with Automated Alerts

- Built a **real-time Power BI dashboard** displaying a **15-day weather forecast** for **200 cities worldwide**, analyzing **25 key weather features**.
- Extracted real-time weather data using API in Python, then loaded it into **Power BI using a Python script**, where data transformation was performed using **Power Query**
- Integrated **Power Automate** to trigger **email alerts** for specific temperature drops in selected cities, enhancing proactive weather monitoring

Credit Card Fraud Detection

- Engineered a scalable fraud detection system using **Databricks, SparkSQL,** and **PySpark,** processing **1.3M records** via feature engineering and data mining to uncover fraud patterns with pipelines
- Evaluated machine learning models optimizing performance with ROC curves, reducing false positives. Utilized **PyCaret** to blend, stack, and ensemble multiple models, achieving **96% accuracy and 88% recall**. This optimization significantly improved model performance and minimized business losses by effectively reducing false positives

---

PUBLICATIONS | Journal-Link

Published a paper: **"Transforming Healthcare Data into Actionable Insights using Tableau"** in Scopus Indexed journal **"Tuijin Jishu/ Journal of Propulsion Technology"** which focuses on getting insights from raw data using data visualization dashboard

---

EDUCATION

Montclair State University — Montclair, New Jersey, USA

Master of Science in Business Analytics — Aug 2023 – Jan 2025

Coursework: Data Wrangling & Analysis, Database Management Systems, Data Visualization, Statistical Analysis, Data Mining, Advanced Data Mining (NLP and LLMs), AI for Business (Big Data and Spark), Optimization for Business Analytics, Business Processes, Analytics Experiential Learning

Vardhaman College of Engineering — Hyderabad, TS, India

Bachelor of Technology in Electronics and Communication Engineering — Aug 2019-May 2023

Relevant Coursework: Database Management Systems, Python Programming, Java, C & Data Structures, Artificial Neural Networks, Image Processing and Pattern Recognition, Managerial Economics and Financial Analysis, Management Science
